

Preventive Pharmacy Services

The following is a list of preventive services that PHP has determined meet, and in some cases exceed, the requirements and recommendations issued by the Affordable Care Act (ACA). The ACA requires that non-grandfathered* health plans cover preventive care services with no cost sharing. These services must be provided by an in-network healthcare provider and billed appropriately as a preventive service. This list is subject to change. Please contact PHP Customer Service at 517.364.8500 for more information.
